

FELIPE CAMPELLO D'ALBUQUERQUE LIMA

Mid-level AI Agent Engineer | Production LLM Systems | Python Backend

Email: felipenehz2003@gmail.com Phone: +55 (61) 99286-4664 Location: Brasilia, Brazil LinkedIn: <https://www.linkedin.com/in/felipecampellolima/> GitHub: <https://github.com/Satsuj1n>

Open to USD remote contracts.

SUMMARY

AI Agent Engineer with 4 years of software engineering experience, including 2+ years of professional backend development. Build production AI agents and LLM systems on top of distributed services, async pipelines and observability. Currently shipping a live crypto trading agent on AWS, plus tooling around Claude Code, MCP servers, and agent orchestration. Treat agents as software: architecture, tests, observability and ops, not just clever prompts.

FEATURED PROJECTS

Cosmic Trader - Production crypto trading agent

- Live on AWS EC2, deployed via Terraform
- Multi-strategy execution with signal to risk to order architecture
- Binance Futures integration, runtime risk management
- Stack: Python

Claude Code Toolkit - Agentic development tooling

- Custom slash commands and MCP server configurations
- Plugin patterns and hierarchical context scaffolds
- Designed for agentic development workflows in large monorepos

Agent Memory Patterns - LLM context infrastructure

- Hierarchical CLAUDE.md scaffolds and per-folder context
- Observability patterns and evals harnesses for LLM systems

PROFESSIONAL EXPERIENCE

Backend Java Developer SEA Tecnologia April 2026 - Present

- Backend development on Liferay 7.4 CE platform, including Service Builder for the data layer, REST Builder for API contracts, and OSGi modules.
- Doc-first workflow with ADRs, design docs and contracts authored before implementation.
- GitLab MR review process with Conventional Commits.

Tech Lead ArtRadar April 2026 - Present

- Architected and built ArtRadar, a SaaS for art market intelligence covering auction houses, galleries and fairs analytics, using Django 5.2, DRF, Celery, PostgreSQL and Redis.
- Clean Architecture covering View, Use Case and Repository layers with Test-Driven Development discipline using pytest and Factory Boy. Coverage gate enforced in CI.
- Dual payment provider integration with Stripe as primary and Pagar.me as fallback, for compliance and availability.
- CI/CD on GitHub Actions covering lint, test, and Docker build to GHCR. Unicorn in production. Leading a 2-person development team.

Full Stack Developer (Backend and Automation), part-time iZJob March 2026 - Present

- End-to-end ownership of Full Stack automation and RPA solutions, covering design, implementation, testing and monitoring.
- Built robust automated flows with SeleniumBase handling popups, timeouts and retries at 95 percent or higher execution success rate.

- Integrated legacy systems with modern web services through well-structured Python and Django APIs, with structured logging and failure alerting.
- Optimized automations with distributed cache, throttling and parallelization, achieving 40 percent reduction in operational time and freeing 10 plus hours per week of manual processing.
- Implemented end-to-end monitoring with dashboards and observability for full execution traceability and fast bottleneck detection.

Full Stack Developer (Backend and DevOps) Coco Bambu Restaurante August 2024 - March 2026

- Built multiple independent microservices using Python with FastAPI and Node.js for critical domains including orders, payments and integrations, with end-to-end ownership covering planning, implementation, deploy and observability.
- Implemented scalable APIs with retry logic, circuit breaker, rate limiting and event streaming using Pub/Sub, processing 10000 plus requests per day at 99.98 percent success rate.
- Modeled data with TypeORM and SQLAlchemy, optimized queries with indexes achieving 60 percent query-time reduction, distributed cache with Redis and ElastiCache across multiple data stores including PostgreSQL, MongoDB and Firestore.
- Deployed 20 plus containerized services on Kubernetes in GCP with metric-based auto-scaling, infrastructure as code using Terraform and Helm, and CI/CD using GitHub Actions and Cloud Build.
- Instrumented systems with New Relic and GCP Monitoring, SLO-based alerting, automated tests using Jest and rigorous code reviews. Authored architectural decision records that raised the team engineering bar.

Programming Tutor (Python and Software Engineering) University of Brasilia (UnB) August 2022 - Present

- Mentored 50 plus students in Python, algorithms, data structures and software engineering practices.
- Focus on real-world problem solving, collaborative code review and design patterns.
- Authored teaching material covering APIs, distributed systems, optimization and SOLID principles, preparing students for technical challenges in professional environments.

SKILLS

AI and Agents: Anthropic, OpenAI, Model Context Protocol (MCP), Claude Code, LangChain, Retrieval Augmented Generation (RAG), Prompt Engineering, Agent Evals Backend: Python, Django, FastAPI, Node.js, TypeScript, Java, Spring Boot, Liferay, REST APIs, GraphQL, Async Workers Cloud and DevOps: AWS, GCP, Terraform, Docker, Kubernetes, Helm, GitHub Actions, Cloud Build, Linux Data: PostgreSQL, MongoDB, Redis, pgvector, Firestore, Cloud SQL Automation: Playwright, SeleniumBase, Headless Browsers Messaging and Observability: Pub/Sub, RabbitMQ, Kafka, New Relic, Grafana, Prometheus, Structured Logging, SLOs

EDUCATION

Licenciatura em Computacao (Computer Science) Universidade de Brasilia (UnB) Status: In progress

WHAT I AM LOOKING FOR

Remote contracts in USD where AI agents do real work in production systems. Comfortable as the AI engineer in a small team or solo on a focused build. Available part-time or full contract.
